EXPERIENCE

Technology Manager | Promoted Sep 2026

May 2025 – Present

U+ Education | Progressive Co-op and Contract Roles

York Region, ON

- **Earned promotion to Technology Manager after progressing through five prior roles**; translate stakeholder needs into requirements for web, data, and internal systems projects, manage priorities in Jira and GitHub, and report progress, dependencies, and risks to organizational leadership.
- **Supervise 200+ volunteers and directly manage six volunteer supervisors** across data, software, and web teams; define assignments and milestones, review Power BI and Tableau dashboards and technical deliverables for accuracy, resolve blockers, and track **2,700+ service hours**.
- **Generated approximately 10,000 conversions in Q2 2026** by analyzing Google Ads and website performance data, identifying improvement opportunities, converting findings into requirements, and coordinating implementation with developers and UX designers.
- **Co-authored a 10-phase delivery plan for a drone training program serving 270+ youth**, establishing scope, schedules, ownership, risk controls, reporting routines, and a **\$35.5K baseline budget**.

Software Developer & Co-Project Coordinator

Feb 2025 – Jan 2026

Islamic Books & Souvenirs | Node.js, JavaScript, Shopify, JSON/CSV

Toronto, ON

- **Built and deployed a Shopify Order Analyzer** that organized JSON/CSV order data, evaluated dimensions against packaging rules, and generated standardized packing instructions, reducing processing time and costs by approximately **15%**.
- **Converted staff needs into documented and tested decision rules**; validated results against order records, corrected logic and data-quality issues, and prepared a repeatable workflow for non-technical users.

Technology Lead

Sep 2024 – Apr 2026

Muslim Student Association at York University

Toronto, ON

- **Designed and deployed a WisePOS/BBPOS, Stripe, and JavaScript donation system** supporting more than **\$10,000 in fundraising**; validated terminal hardware and payment data flows, trained volunteers.

TECHNICAL PROJECTS

CAN-FD ECU Diagnostic Test Bench | STM32, C/C++, FreeRTOS, CAN-FD, Python

- **Designed and implemented a two-controller hardware test bench**: sensor firmware publishes temperature and RPM frames while an actuator ECU checks message identity, integrity, and freshness before controlling a fan.
- **Built a Python validation harness** to capture CAN-FD traffic, inject dropped or delayed frames, and verify timeout handling, fail-safe transitions, and recovery against expected system behaviour.

RF Asset Finder | Arduino, C/C++, 433 MHz RF, Custom Packet Protocol

- **Built and tested a low-power RF tag and base station** in C/C++, establishing a 433 MHz link for identifying and locating shared equipment.
- **Implemented and debugged a custom packet protocol** with device IDs, CRC validation, acknowledgements, and retransmission logic to identify invalid messages and recover from missed responses.

Split Workout Tracker | PostgreSQL, MySQL, Prisma, Node.js, REST APIs

- **Designed a relational data model and tested REST API endpoints** for users, programs, exercises, logs, sets, and progress records, preserving consistent data across web and mobile clients.

EDUCATION

York University

Toronto, ON

Bachelor of Engineering in Computer Engineering

Expected 2028

- **Gordon and Agnes (Twambley) Brash Award in Engineering**: Sole engineering student recipient, recognized for academic achievement, leadership, and community involvement.
- **Relevant Coursework**: Electrical Circuits, Electronic Circuits and Devices, Embedded Systems, Digital Logic Design, Computer Organization, Database Systems and Design, Probability & Statistics, Operating Systems, and Engineering Project Management.

LEADERSHIP & COMMUNITY ENGAGEMENT

Selected Speaker, OACAO Aging Well Conference | Chosen to represent U+ Education as a speaker at the provincial conference
Community & Government Engagement | Represented U+ Education at engagements with MP Tim Hodgson and Richmond Hill Mayor David West; directed technical operations for three 500+ attendee events.

TECHNICAL SKILLS

Programming & Data: Python, SQL, C, C++, Java, JavaScript, PostgreSQL, MySQL, Prisma ORM, JSON/CSV processing

Analytics & Reporting: Power BI, Tableau, Excel, dashboard review, data visualization, data validation, performance analysis

Engineering & Systems: Arduino, CAN-FD, UART, SPI, I2C, 433 MHz RF, hardware-software debugging

Project Delivery & Tools: Requirements, schedules, milestones, budgets, risk and issue tracking, process documentation, technical reporting, Microsoft Office Suite (Excel, Word, PowerPoint, Outlook), Git, GitHub, Jira, Docker
